Niall McPhillips

You're been asked to write an ORDS REST API. What next?

Jan Květina

Workshop - APEX Deployment Tool

Andrei Manoliu

Workshop - Retrieve information from unstructured data using Natural Language - AI Vector Search

What to expect

This event is all about new concepts, frank discussions, and a chance to glimpse the future of technology, without all the typical hype. You'll hear from folks who are testing on the bleeding edge, gain practical advice you can put into action, and maybe find a new path for your own endeavours.

We're bringing together a mix of big-picture talks, hands-on sessions, and stories from the field that make complex topics click.

Seek out empowering keynotes, partner insights, and in-between moments when you connect with others of like mind. And yes, we've made time for coffee, food, and the sort of side conversations that all too often become the highlight of the day.

Gain skills. Get inspired. Grow your network.
